"The disulfide structure of mouse lysosome-associated membrane protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Lysosome-associated membrane glycoprotein
                                                 J. Biol. Chem. 265:7419-7423(1990).
-!- FUNCTION: Presents carbohydrate ligands to selectins. Also implicated in tumor cell metastasis.
-!- SUBCELLULAR LOCATION: Type I membrane protein. Lysosomal. This protein shuttles between lysosomes, endosomes, and the plasma
                                                                                                                                      -1- PTM: O- and N-glycosylated; some of the N-glycans attached to LAMP-1 are polylactosaminoglycans (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          --> MRPPRAAAV (in Ref. 2)

                                                                                                                                                                      -i- FUNCTION: Presents carbohydrate ligands to selectins. Also implicated in tumor cell metastasis.
-i- SUBCELLULAR LOCATION: Type I membrane protein. Lysosomal. This protein shuttles between lysosomes, endosomes, and the plasma
                                                                                                                                                                                                                                                     membrane.
-!- PTM: O and N-glycosylated; some of the N-glycans attached to LAMP-1 are polylactosaminoglycans (By similarity).
-!- SIMILARITY: Belongs to the LAMP family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (Potential). (Potential). (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (Potential)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (Potential)

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of a novel synthetic cyclic peptide of the invention that is capable of inhibiting the agr response of staphylococcus aureus. It is an AgrD-autoinduring peptide, where AgrD is secreted agr-encoded peptide and where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. Preferred peptides may have residue and COOH other than a thioester bond, where X is an amino acid, an amino acid analogue, a peptidominetic or non-amide isostere, Z is a synthetic or a biosynthetic amino acid, n is 0-10 and y is 1-10. The cyclic bond is especially a lactam or lactone bond. The thiololaccone structure within native AgrD peptides is required for activation of the structure can destroy agr response activating activity while preserving and enhancing inhibitory activity. A claimed method of preparing a cyclic
                                                                                                                                       ö.
with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus {\sf conposition} in the peptides of the strain of the peptides of the strain of the

The present invention also describes a method for treating Staphylococcus aureus infection comprising the administration of a composition comprising the administration of a used as an agr gene response inhibitor. The peptides are useful for treating S. aureus infections
peptide involves; assembling a linear peptide chain on to a solid phas resin support; deprotecting the resulting protected assembled peptide; treating the deprotected peptide with neutral buffer for a time sufficient to form the cyclic peptide and cleave the peptide from the support; and recovering the cyclic peptide. The peptide is useful for bacterial interference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cyclic peptide; Staphylococcus aureus; infection; antibacterial; agr response inhibitor.
                                                                                                                                                                                                                                                                                                     .

This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polymucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. Impare infection. The method reduces the number of potential new targets and prevent mycobacterial diseases, particularly tuberculosis and mycobacterium tuberculosis and Mycobacterium tuberculosis and Mycobacterium teprae identified using the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying and selecting genes for survival or virulence of mycobacteria by a comparative genomic analysis of the sequences of Mycobacterium tuberculosis and M. leprae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mycobacterium tuberculosis; infection; antibacterial; tuberculostatic; immunostimulant; vaccine; gene therapy; mycobacterial infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises a gligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polymucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. Iepgrae infection. The method reduces the number of potential new targets and protective antigens for new drugs and vaccine compositions to treat and provent mycobacterial diseases, particularly tuberculosis and Mycobacterium tuberculosis and Mycobacterium leprae identified using the method of the invention

```
This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ABPS7436 to ABPS7504 represent mycobacterial amino acid sequences (I) encoded by ABZ71062 to ABZ71130 (II), which are isolated from Mycobacterium tuberculosis. (I) are encoded by ganes (II) whose expression is induced or up-regulated during culture of a mycobacterium under conditions defined by a dissolved oxygen tension of at least 10% air saturation measured at 37 plus degrees Celsius, when compared with a dissolved oxygen tension of at least 40% air saturation measured at 37 plus degrees Celsius, under compared with a plus degrees Celsius. (I) and (II) have antibacterial, tuberculostatic and immunostimulant activities, and can be used in vaccines and gene therapy. (I) and (II) can be used for the manufacture of a medicament for treathing or preventing a mycobacterial infection. They can also be used for the manufacture of a diagnostic reagent for identifying a

Synergistic antiblotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for tracting pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of autoinducer-2 agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis, also antibiotic compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Shokat K, Stein J, Surette MG;

Protected peptide used in cyclic peptide production.

(first entry)

08-MAY-2002

```
The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AAMS0899-906). The peptide corresponds to the Staphylococcus aureus aground a Cys5 to Ser mutation (lactone). It was synthesised on a Wang-resin using an Fmoc N-alpha protection strategy. Following con a Mang-resin using an Fmoc N-alpha protection strategy. Following contain assembly, the peptide was cleaved from the support and the Ser-5 residue deprotected by treatment with a trifluoroacetic addianisole water mixture (90:5:5) for 4 hr. The partially protected peptide-alpha carboxylates were then dissolved in DMF and treated with complete after 2 hr. The remaining protecting groups were then removed by treatment with HF and the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the agr response of Staphylococcus aureus. The thiololactone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure with a lactone (as in the present case) or a lactam can destroy activity. The cyclic peptides are useful for enhancing inhibitory activity. The cyclic peptides are useful for the contains interference, especially for the treatment of S. aureus
Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection in a
                                                                                                                                                                                                                                                     Disclosure; Col 14; 18pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of a novel synthetic AgrD2 lactone cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a lactone bond. The peptide is derived from an AgrD2 peptide 0 via a station of the peptide is derived from an AgrD2 peptide of staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other carracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthesic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrP3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. The lactone AgrD2 peptide inhibited the agr response of group I S. aureus strains without culturating the agr response of group I S. aureus strains without provides claimed cyclic peptides (see AAMS0899-906 and AMMS0899) and methods for preparing them, especially peptides where the cyclic bond is a lactam or lactone bond. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection.

The present sequence is that of a novel synthetic AgrD2 linear free acid peptide. The peptide is derived from the cyclic AgrD2 peptide of stapping between the peptide is derived from the cyclic AgrD2 peptide of stapping controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured is areas strains containing a beta-lactamase reporter gene fused to the agr3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. Unlike an AgrD2 thiololactone cyclic peptide (see Awh51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at UM concentrations. The invention provides claimed cyclic peptides (see Awh51001) and methods for preparing them. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCN) primers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed continuous is useful in gene therapy techniques to restore normal cutivity of (II) are to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and its binding partners are useful for treating disorders of sites expressing (II). (I) and its binding partners are useful for treating disorders of polypeptide and polynucleotide sequences have applications in diagnostic formsics, formsics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SKKK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of a novel synthetic AgrD2 linear thioester peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agr P3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophocometrically. Unlike an AgrD2 thiololatone correction of the peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at UM concentrations. The invention provides claimed cyclic peptides (see AAM50999) and methods for preparing them. The cyclic peptides are useful for bacterial interference, especially for the

The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and the polynucleotides encoding them. The sequences are useful in diagnosis and the pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bhid a P aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of freedomonant species using biochip technology. Sequences ABO67826-
of Pseudomonas species using biochip technology. Sequences ABO67826-
sequence data for this patent did not form part of the invention. Note: The specification but was obtained in electronic format from USPFO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                            Bacterial infection; Pseudomonas aeruginosa infection; antibacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               81.1%; Score 30; DB 7; Length 332; 66.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of a novel synthetic cyclic peptide of the invention that is capable of inhibiting the agr response of the invention that is capable of inhibiting the agr response of the stability of the sequence aureus. It is an Agrb-autoinduing peptide, where AgrD is a secreted agr-encoded peptide and where the agr locus controls the synthesis of virulence factor and other extracellular proteins for pathogenicity in S. aureus. Preferred peptides may have the sequence NNI2-X(N)-2-X(Y)-cool, with a cyclic bond between the Z cresidue and COOH other than a thiosester bond, where X is an amino acid, an amino acid analogue, a peptidomimetic or non-amide isostere, Z is a namino acid analogue, a peptidomimetic or non-amide isostere, Z is a namino acid analogue, a peptidomimetic or non-amide isostere, Z is a synthetic or a biosynthetic amino acid, n is 0-10 and y is 1-10. The cyclic bond is especially a lactam or lactone bond. The thiololactone structure within native AgrD peptides is required for activation of the cyclic agr response. Blimination of the thiol ester component of the cyclic ring structure can destroy agr response activating activity while preserving and enhancing inhibitory activity. A claimed method of preparing a cyclic
                                                                                           ö
with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus \,

```
ö
peptide involves: assembling a linear peptide chain on to a solid phase resin support; deprotecting the resulting protected assembled peptide; treating the deprotected peptide with neutral buffer for a time sufficient to form the cyclic peptide and cleave the peptide from the support; and recovering the cyclic peptide. The peptide is useful for bacterial interference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABP53540 to ABP53547 represent cyclic peptides (1) from the present invention. The present invention also describes a method for treating Staphylococcus aureus infection comprising the administration of a composition comprising (1). (1) has antibacterial activity, and can used as an agr gene response inhibitor. The peptides are useful for
                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cyclic peptide; Staphylococcus aureus; infection; antibacterial; agr response inhibitor.
                                                                                                                                                                                                                                                                                                 .

This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibite the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                    New cyclic peptides for treating infections with Staphylococcus aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           vulnerary; pheromone; agr system; accessory gene regulator; cyclic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cyclic peptides for treating infections with Staphylococcus aureus.

Synergistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated

The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AAMS0899-900). The peptide corresponds to the Staphylooccusa aureus AAMS089-900, The peptide accorresponds to the Staphylooccusa aureus chain assembly, the peptide was cleaved from the support and the Ser-5 caid-anisole:water mixture (90:5:5) for 4 hr. The partially protected peptide-alpha carboxylates were then dissolved in DMF and treated with peptide-alpha caralytic amount of dimethylaminopyridine. Cyclization was complete after 2 hr. The remaining protecting groups were then removed by treatment with HF and the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the agr response of staphylooccus aureus. The thiololactone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ing structure with a lactone (as in the present case) or a lactam can destroy agr response activating activity while preserving and enhancing inhibitory activity. The cyclic peptides are useful for the cyclic inference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                note= "note linked to residue 9 to form cyclic peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note= "note linked to residue 5 to form cyclic peptide"

The present sequence is that of a novel synthetic AgrD2 lactone cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a lactone bond. The peptide is derived from an AgrD2 peptide 9 via a secrete by the factor and stable from an AgrD2 peptide of actorious aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrs promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. The lactone AgrD2 peptide inhibited the agr response of group I S. aureus strains without contained cyclic peptides (see AAMG0899-906 and AMG0899-906 and methods for preparing them, especially peptides where the cyclic bond is a lactone bond. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AgrD2; agr response; inhibitor; antibiotic; antibacterial; infection;

The present sequence is that of a novel synthetic AgrD2 linear free acid peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agris prometer. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAM51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at um concentrations. The invention provides claimed cyclic peptides (see AAM50899) and methods for preparing them. The cyclic peptides are useful for bacterial interference, especially for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AgrD2; agr response; inhibitor; antibiotic; antibacterial; infection;

The present sequence is that of a novel synthetic AgrD2 linear thioester peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrP3 promoter. This allowed activation or inhibition of the agr response to be monitored spectropherometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAM51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at un concentrations. The invention provides claimed cyclic peptides (see AAM50999) and methods for preparing them. The cyclic peptides are useful for bacterial interference, especially for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a cyclic peptide derived from the Staphylococcus aureus AgrD peptide. The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New cyclic peptides for treating infections with Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Staphylococcus aureus infection; cyclic peptide; AgrD; agr response; virulence factor; treatment.
                                                                                                                                                                                                                                                                                                                                                                                       1; Indels

This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cyclic peptides for treating infections with Staphylococcus aureus

The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis. Syncatyistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of autoinducer-2 agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis, also antibiotic compositions.

/note= "note linked to residue 9 to form cyclic peptide"

```
The present sequence is that of a novel synthetic AgrD2 lactam cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a lactam bond. The peptide is derived from an AgrD2 peptide 9 via a statam bond. The peptide is derived from an AgrD2 peptide 9 via a staphylococous aureus group II. AgrD2 is a secreted agr-encoded peptide. Staphylococous aureus group II. AgrD2 is a secreted agr-encoded peptide. The synthesis of virulence factor and other where the agr locus controls the synthesis of virulence factor and other biological activity of the synthesic peptide was assayed using cultured 5. aureus strains containing a beta-lactamase reporter gene fused to the agrs promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. The AgrD3 lactam peptide inhibited the agr response in group I S. aureus strains and did not activate the agr response in group I S. aureus strains and did not provides claimed cyclic peptides (see AAMS0899-906 and AAMS0899-906 and AAMS0899-906 and AAMS0899-906 and AAMSO899-906 and AAMSO899-906 and AAMSO899-906 and AAMSO899-906 and AAMSO899-906 and interference, especially for the treatment of S. aureus infection.

(Updated on 07-AUG-2003 to correct OS field.)

The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AM56899-906). The peptide corresponds to the Staphylococcus aureus of AM56899-906. The peptide corresponds to the Staphylococcus aureus of ADTDII sequence with a Cyss to diaminopropionic acid (Dpr) mutation (action strategy. Following chain assembly, the peptide was cleaved from the support and the Dpr-5 residue deprotected by treatment with a trifluoracetic acid:anisole:water mixture (90:5:5) for 4 hr. The partially protected peptide-alpha carboxylates were then dissolved in DMF and treated with Py80P. Cyclization was complete after 2 hr. The remaining protecting groups were removed by treatment with HF and the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the captive AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure within a lactam (as in the present case) or a lactone can destroy agr response activating activity while preserving and enhancing inhibitory activity. The cyclic peptides are useful for becterial interference, especially for the treatment of S. aureus infection
                                                                                                                                                                                                                                        Modified-site
                                                                                                                                                                                                                                                                   Modified-site
                                                                                                                                                                                                                                                                                              Modified-site
